BUILD6™

WEEK 11 · How a Business Actually Works

Champion Tire & Wheel - Operations. Customers. Quality. Careers.

FACILITATOR GUIDE

Week Purpose

Use a real workplace to understand operations, workflow, customer experience, quality, safety, supply chain, technology, financial impact, teamwork, and hidden career paths.

Essential Question

How do people, process, technology, quality, safety, and customer needs connect inside a real business?

Skills

- Systems thinking
- Operations
- Workflow
- Quality control
- Customer experience
- Safety
- Supply chain awareness
- Business economics
- Career exploration

Weekly Rhythm

Monday · Catch-Up + Business Systems Discussion

Finish missing work and discuss what has to happen behind the scenes for a customer to receive a finished product or service.

Facilitator note: Monday is primarily catch-up, accountability and discussion. Do not overload it with new instruction.

- What happens behind the scenes?
- Where can one mistake affect quality, money, safety or reputation?
- What jobs exist that customers may never see?

Tuesday · Business Systems Lab

Map a customer need from first contact to finished outcome. Identify roles, handoffs, quality checks, delays, waste, customer impact and money impact.

- Customer need
- Workflow steps
- Roles / responsibilities
- Handoffs
- Quality / safety checks
- Where time, money or reputation can be lost

Wednesday · Champion Research

Research products/services, customers, problems solved, likely workflow, technology, safety, careers and tour questions.

Facilitator note: Run the activity exactly enough that students practice, receive feedback, and can explain what they learned.

- Products/services
- Customers and problems solved
- My workflow hypothesis
- Technology / safety I expect to see
- Hidden careers I want to look for
- Tour questions

Thursday · Operations Detective Tour

Wear closed-toe shoes. Observe one workflow, quality-control point, customer-service moment, technology use, safety practice, teamwork/leadership behavior and unexpected career.

- One workflow
- One quality-control point
- One customer-service moment
- One technology use
- One safety practice
- One leadership/teamwork behavior
- One unexpected career
- One improvement question

Friday · Operations Debrief + Thank-You

Write a thank-you, connect observations to transferable skills, and preserve a business-systems artifact.

Facilitator note: Finish missing work first, then reflection, thank-you/follow-up when appropriate, and portfolio/capstone evidence.

- What surprised me?
- Where could a mistake cost time, money or reputation?

- One transferable skill I saw
- One business improvement insight
- Portfolio/capstone evidence

Coach Jones - Wednesday Run of Show

1. Customer-to-Outcome Map - Teams map a customer request through roles, handoffs, materials/information, quality, safety and final delivery.

2. Handoff Failure - A workflow card is removed or changed; teams identify downstream customer, time, cost and reputation effects.

3. Quality / Safety Checkpoint Challenge - Teams decide where checks belong and what happens if they are skipped.

4. Operations Detective - Students use a structured observation sheet during the Champion tour.

Facilitator Questions

- What did you notice?
- What changed after feedback or a second attempt?
- Where would this matter in a real workplace?
- What decision did the student own instead of outsourcing?
- What evidence should be saved for portfolio or capstone?

Midweek Reflection

What part of a business system had I never thought about before, and why does it matter?

Friday Reflection

What did Champion Tire & Wheel show me about how one person's work affects customers, quality, safety, time, money, and the rest of the team?

Capstone Connection

Preserve one operations insight that changed how you understand work: what you observed, which roles were connected, and what could happen if one handoff failed.
